

# AutoStream For Oracle Applications

**One-Stop Document = Capture + Creation + Workflow + Delivery**

Creating and automating business documents is complex. Oracle Applications alone cannot meet the demands from customers, suppliers, partners, and your employees for individualized content, formats, delivery, exchange, and fast changes. Only Sirvisetti meets these needs in one system, while significantly lowering costs and easily accommodating changes.

## The Power of One!

**“The choice is Sirvisetti - or multiple other vendors to accomplish the same thing.”**

### The Value of One

- Reduce current document distribution costs by 10% - 25%
- Increase value to customers, partners and suppliers by delivering their desired content and distribution method
- Increase employee productivity by 20% to 60% by providing the exact information needed to perform their jobs
- Provide rapid compliance (SOX, HIPAA, etc.) capabilities
- Simplify operations and processes, reducing costs of specialists, integration, maintenance contracts and support charges – lowest TCO
- Typical ROI in less than 3 months
- Proven solution with over 10,000 users

### Sirvisetti: The Power of One

**One Platform:** AutoStream is the one enterprise document lifecycle solution that enables the multi-functionality demanded in today's changing business environment. AutoStream's AppTalk™ Engine dynamically produces content additions and deletions, combining in real-time content, data, barcodes, and graphics from disparate internal and external systems to form the right, precisely tailored document specifically for each need. The software is completely modular, reliable and scalable to accommodate small to large businesses.

**One Engine:** While other vendors require separate engines for each document streaming method, Sirvisetti's one-Engine flexible approach has significant performance, scalability and reliability advantages throughout the document life cycle, and is the key to our lowest total cost of ownership (TCO). AutoStream is built with open standards - its core technologies include XML and Web Services, which provide flexibility and adaptability. The Sirvisetti architecture accelerates Service Oriented Architecture (SOA) capabilities.

**One Vendor:** Sirvisetti as a single supplier produces faster results and is highly responsive, leading to reduced initial and ongoing costs. Our customers have rated our service as excellent. We provide full services including training, turnkey implementations, maintenance, and support - global 24 x 7 is available.

**“Sirvisetti offered us superior service. It was a big savings to our company when we could depend on Sirvisetti to meet our business and technology needs.”**

**-Multi-Billion Dollar Distribution Company**

# Sirvisetti's High-Value Functionality

## Adaptability & Flexibility

Existing documents must frequently be changed to meet new business requirements, both within the enterprise and outside for customers, vendors, and partners. AutoStream is highly flexible and easily accommodates change, saving significant time at every stage.

## Security

AutoStream ensures secure information flows across the enterprise, with up to six security options available. AutoStream can be integrated with single sign-on systems, including LDAP. There are also provisions for legislative compliance such as Sarbanes-Oxley, HIPPA, and other privacy regulations.

## Workflow Automation

AutoStream enhances the value of business documents by altering (adding and/or deleting) content and data dynamically. It nearly eliminates manual steps and incorporates approval, routing, digital signatures and other workflow elements to achieve complete automation of the business processes and integration of the document life cycle.

## Document Distribution Life Cycle Management

AutoStream provides integrated management at each stage of the document distribution life cycle. Your ability to use existing data, content and documents residing in Oracle Applications and Legacy systems is completely retained, while delivering and storing (including logs) desired content or documents sent to employees, customers and partners.

## Other AutoStream Features

- Extend the value of Oracle Applications as well as Legacy and ECM systems
- Access log data for compliance, audit, security and reporting
- Ability to exchange content and documents in multiple formats (PDF, PS, XML, EDI, etc.)
- Local and remote distribution capabilities to multiple locations
- Browser-driven, using portals or desktop devices - point and click user interface
- Platform-independent

*"I was able to satisfy four critical business needs with one vendor, Sirvisetti. I estimated a savings of 35% in cost of ownership alone, as well as avoiding the headache of dealing with multiple vendors to solve the problems."*
