

AUTONOMY

Autonomy Chatbot, Agent and BYO Agent

Conversation, reasoning and governed execution are separate layers.

Sirvisetti - Autonomize Your Business

Connect. Automate. Autonomize.

Four terms, four jobs

Avoid blurring Chatbot, Agent, LLM and Autonomy.

Autonomy Chatbot @auto

Conversation in websites and chat channels.

Autonomy Agent

Optional built-in reasoning and autonomous behavior.

Bring Your Own Agent

Customer or third-party agents using the same governed surface.

Autonomy

Governed business execution platform.

LLM

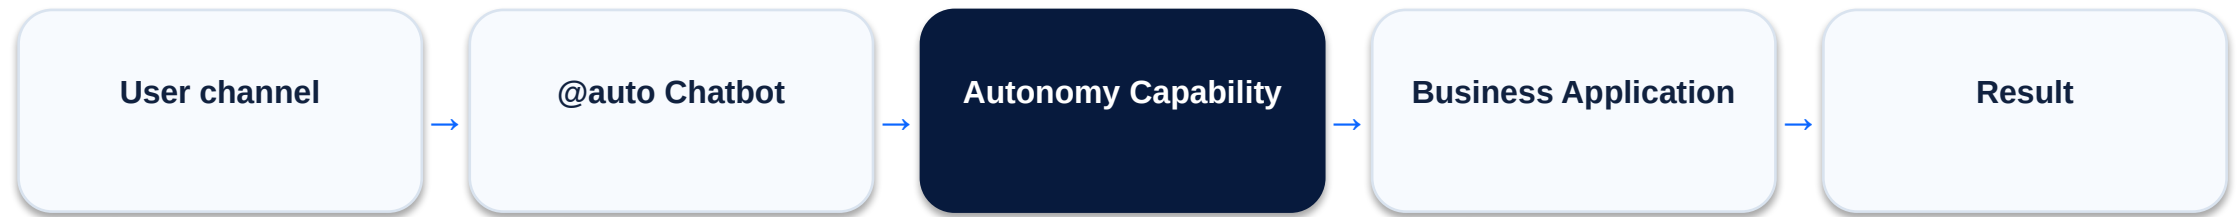

Interchangeable model infrastructure beneath agents.

Packs

Capabilities and implementations consumed by all access modes.

How @auto fits

The Chatbot is a conversational interface, not the Agent.

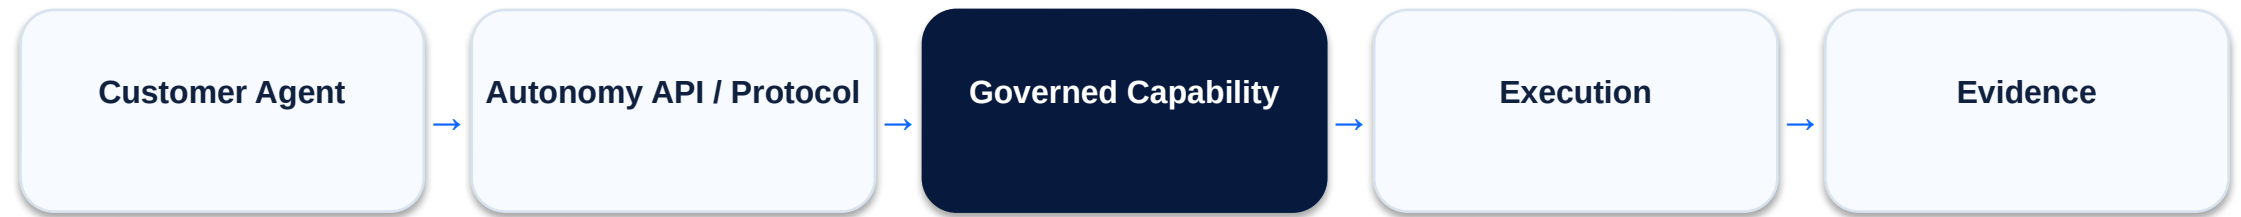

Autonomy Agent

Optional built-in autonomous agent.

- 01 Provides reasoning, planning and autonomous behavior over governed capabilities.
- 02 Can ship with a default local LLM option.
- 03 Can use a customer-selected supported LLM or model provider.
- 04 Invokes bounded Autonomy capabilities rather than broad application credentials.

BYO Agent model

Any agent. Every business capability. Governed execution.

Future website demo

Sirvisetti.com can become a live public product demonstration.

01

Embed @auto as a public website chatbot.

02

Initially answer from approved website and resource content.

03

Later route selected questions to governed sandbox capabilities.

04

Keep production execution separate from public demonstration scope.
