

Autonomy Executive Presentation

Business value, vision and differentiation for the autonomous business era.

Autonomize Your Business

Businesses have spent decades integrating applications and automating repeatable work. The next step is to make business capabilities safely executable from intent without surrendering governance.

Sirvisetti Autonomy is the governed execution platform for autonomous business.

The operating model

People and AI agents express what needs to happen. Autonomy resolves the correct business capability, identity, policy, application binding and environment before execution.

Core points

People + AI Agents -> Autonomy -> Business Applications

Applications remain systems of record. Autonomy becomes the system of action.

Turn business intent into governed action.

Grow through Packs

The Autonomy Platform is designed to remain stable. Business Packs and Application Packs expand the capability catalog independently from the platform release cycle.
