

# Autonomy Packs Overview

How Business Packs and Application Packs expand capabilities independently from the stable platform.

## Keep the platform stable

The Autonomy Platform should change slowly. Most day-to-day expansion happens through Packs, allowing organizations to grow the capability catalog without continually modifying the core platform.

## Business Packs

Business Packs contain reusable business meaning such as Processes, Policies and Actions organized around enduring domains like Procurement, Finance, Sales and HR.

## Application Packs

Application Packs implement canonical capabilities for specific applications and technologies. They connect business meaning to SAP, Oracle EBS, Salesforce, ServiceNow and other systems without redefining the capability itself.
