

AUTONOMY

Autonomy Platform - Business Overview

The governed execution platform for autonomous business.

Sirvisetti - Autonomize Your Business

Connect. Automate. Autonomize.

The business problem

People and agents still need to know too much about application mechanics.

01

Business work is scattered across ERP, CRM, service, HR, APIs and workflows.

02

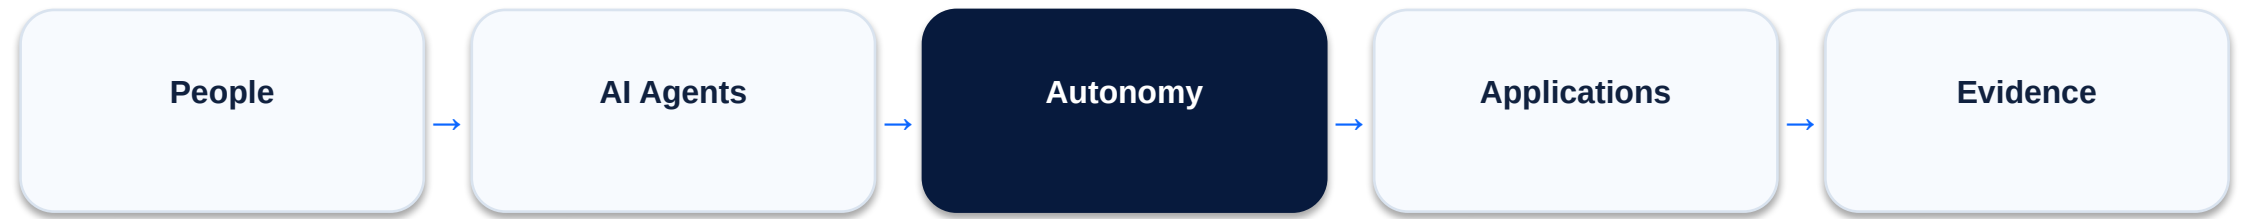

AI agents make intent easier, but direct access to operational systems creates a governance problem.

03

Organizations need a system of action that turns intent into governed business execution.

The operating model

People and agents request outcomes. Autonomy governs execution.

What Autonomy provides

Business capabilities as the executable abstraction.

Capability catalog

Discover what the business can do.

Governed execution

Identity, policy, approvals and environment boundaries.

Evidence

Record how the request was resolved and executed.

Packs

Expand business and application coverage independently.

Any agent

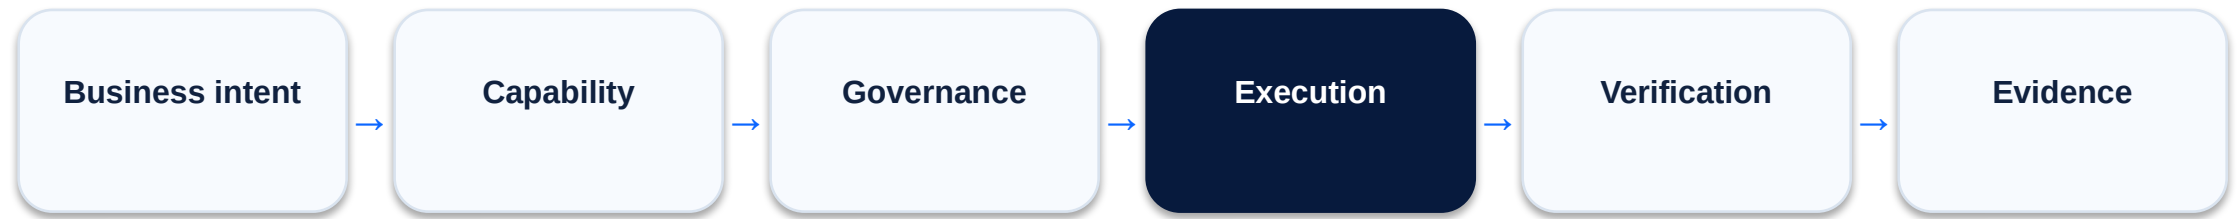

Chatbot, built-in Agent, external agents or headless clients.

Systems of record

ERP, CRM and other applications keep their role.

Governed execution path

Every action follows a controlled path.

Adoption path

Start small, then expand through Packs.

01

Pick one recognizable business outcome such as Get PO 12345.

02

Bind it to one application environment and apply governance.

03

Show evidence and verification after execution.

04

Expand toward more capabilities, domains and applications through Packs.
