

Autonomy Product Datasheet

A concise overview of the Autonomy platform and product model.

What is Autonomy?

Autonomy is the governed execution platform for autonomous business. It turns business intent into governed action across the applications an organization already runs.

Core capabilities

Governed Processes, Actions and Policies

Application Environments, bindings and identity mappings

Execution evidence and operational visibility

Autonomy Chatbot (@auto), Autonomy Agent and BYO-agent access

Business Packs and Application Packs

Designed for existing systems

Autonomy does not require organizations to replace ERP, CRM, HR, ITSM or custom applications. Those systems remain authoritative systems of record while Autonomy provides the system-of-action layer above them.
