

AUTONOMY

Business Packs Overview

Reusable business capabilities independent of application vendor.

Sirvisetti - Automize Your Business

Connect. Automate. Autonomize.

What Business Packs are

Packaged business meaning for autonomous business.

01

Business Packs organize capabilities by business domain.

02

They describe what the business can do, not how a particular application does it.

03

They can contain capability definitions, processes, policies and actions.

04

They help Autonomy grow without destabilizing the platform.

Initial domains

Start with domains customers recognize.

Procurement

Suppliers, requisitions, purchase orders and approvals.

Finance

Invoices, payments, holds and financial exceptions.

Sales

Customers, orders, shipments and revenue operations.

Human Resources

Employee onboarding and people operations.

Service

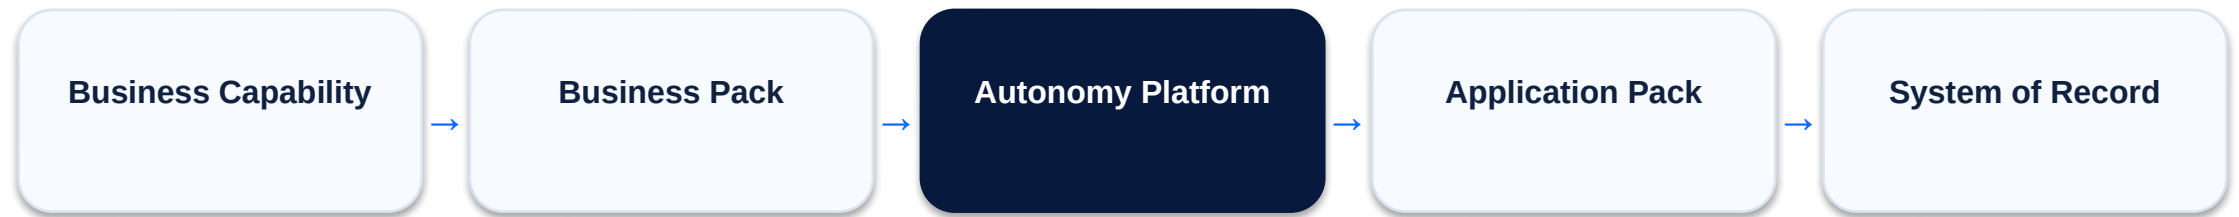

Service requests and issue resolution.

Reporting

Cross-application business inquiry and reporting.

Business Pack to Application Pack

Business meaning stays portable.

Why it matters

Keep business vocabulary stable as technology changes.

01

The same capability can be implemented in SAP, Oracle EBS, Salesforce or another system.

02

Customers can start with one domain and expand gradually.

03

Capabilities can be governed consistently regardless of implementation.

04

Pack lifecycle can move faster than core platform lifecycle.
