

AUTONOMY

SAP Application Pack - Business Overview

Autonomy capabilities for SAP-centered business operations.

Sirvisetti - Autonomize Your Business

Connect. Automate. Autonomize.

Why SAP customers care

Make SAP capabilities easier to invoke without bypassing control.

- 01 Users should not need to know the SAP transaction, screen, API or environment for every outcome.
- 02 AI agents need bounded governed capabilities rather than broad SAP credentials.
- 03 Autonomy applies identity, policy, environment resolution and evidence before execution.

Representative business areas

Initial planning areas for SAP coverage.

Procurement

POs, requisitions, suppliers and approvals.

Finance

Invoices, holds, payments and finance exceptions.

Sales

Orders, deliveries and customer inquiries.

HR

Employee and onboarding-related capabilities.

Logistics

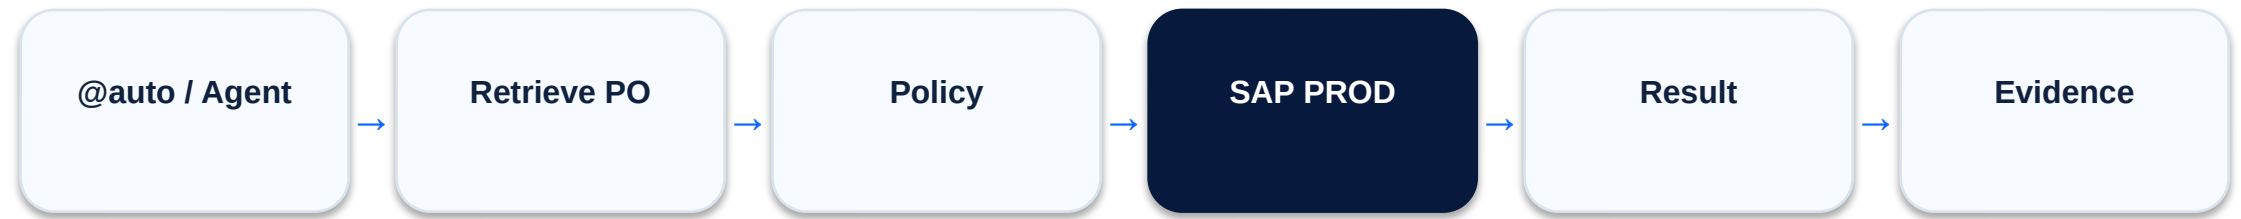

Delivery and shipping status.

Reporting

Cross-system business inquiry.

Example: Get PO 12345

Business intent becomes governed SAP action.

Value story

SAP remains the system of record. Autonomy becomes the system of action.

01

Simplify access to SAP outcomes for business users and agents.

02

Apply governance consistently across SAP environments.

03

Separate business capability from SAP-specific implementation details.

04

Expand coverage through SAP Application Pack versions.
